EFW Radiology Comprehensive Pain Management Services

For over 25 years, EFW Radiology has been performing interventional pain procedures. Our Musculoskeletal and Neuroradiology specialists were the first to expand pain management services from Foothills Medical Center into the community. Our community pain practice has grown to perform over 35,000 procedures per year.

EFW Radiology Pain Management Injections

Interventional pain management uses non-surgical, minimally invasive techniques to treat acute, subacute and chronic pain. Our goal is to improve the quality of life for patients, helping them return to everyday activities and avoiding/delaying surgery. Additionally, anesthetic can be utilized to accurately diagnose sources of pain.

EFW's sub-specialized Radiologists are trained specifically to use image guidance (ultrasound/x-ray/CT) to accurately advance fine needles to the anatomic structures causing patient pain. This allows targeted injection of medication (e.g. anesthetic, corticosteroid, hyaluronic acid, regenerative therapies), aspiration of fluid (e.g. joint effusion, bursa, ganglion cyst) or temporary disruption of nerves (e.g. radiofrequency ablation/neuromodulation, cryoneurolysis) to provide diagnosis and/or treatment.

The EFW Advantage

- Warm, welcoming and supportive environment for all patients
- Timely and efficient booking
- Knowledgeable specialist team
- Service in Calgary & Area
- Complimentary Parking
- Accessible Facilities

Pain Management Referrals
